

Public Service Announcement: Town Addressing Odor Control at Wastewater Treatment Plant

The Town of Crested Butte recently modified the aeration process at the wastewater treatment plant to improve the process for handling sludge. This modification has generated some unpleasant odors. The Town is working to minimize odor coming from the plant and is modifying the aeration process. Sludge is also being processed more quickly to help decrease the odor. Additionally, the Town will continue making improvements to the filters at the plant, which help mitigate odor. Controlling odor from the wastewater treatment plant is a priority for the Town. If you have any questions please contact: Wastewater Treatment Plant Manager Matt Peacock at 349-5530.
